

Energy for everybody

**Affordable solar inverters that will revolutionise
the world of photovoltaics.**

zeversolar

How to create a new world? Start with the best of two worlds.

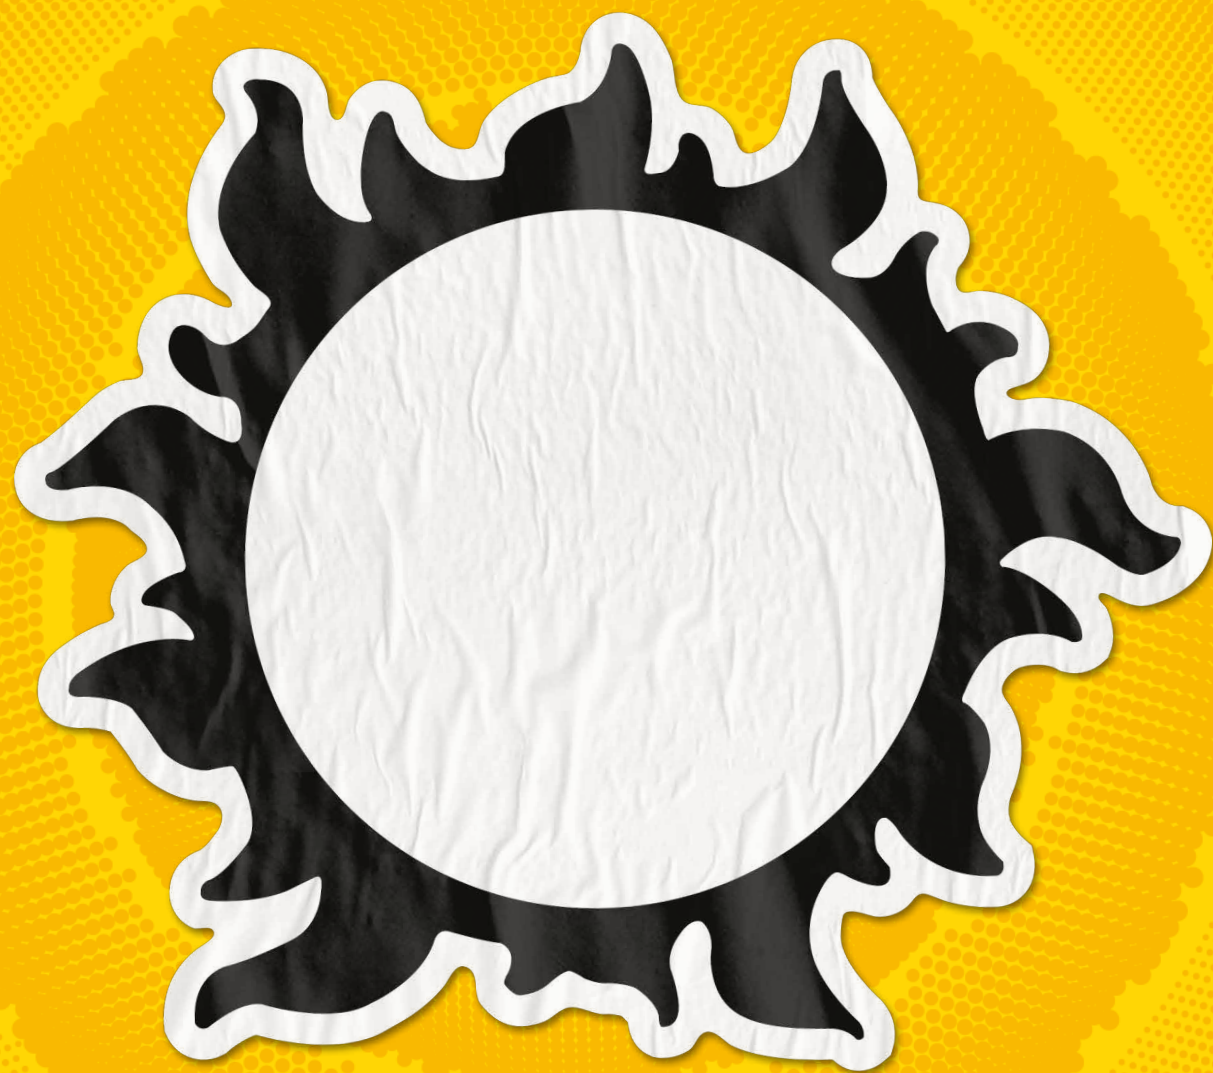

Every revolution is built on the remains of the old world. Reshaping the photovoltaic world actually involves the best of two worlds. The first is China, where Zegersolar started in 2007 as one of China's largest manufacturers of photovoltaic inverters.

In 2013, a second world was entered: by becoming a part of the SMA Group, advanced engineering, process competence and increased product quality was added.

From now on, we are starting nothing less than the changing of the world. By making inverters that are simple to install, easy to use and affordable to more and more people. And more and more people using solar power represents a game-changing approach to energy in this world.

Join in, because the cleanest power in the hand of the masses is possible. Now. Here. In this new world.

A big change requires a strong belief, and a strong belief requires a solid credo. Turn the page, please, to read ours.

**You don't need to be rich,
you don't need to be big,
you don't need to be famous,
to let the sun shine on you.**

**The sun has belonged
to all of us.
Since the beginning of time.**

**And with the reliable
and affordable
inverters from Zegersolar,
the power of the sun
is now in your hands.**

Energy for everybody!

**Sounds simple in theory.
Have a look at how we put
simple into practice.**

For big. For small. For all.

To revolutionise the way mankind treats the planet we live on, we deliver a range of smart and affordable helpers. Our public grid-connected photovoltaic string inverters range from 1.5 kW to 20 kW to satisfy a wide range of residential and commercial applications, while our central inverters range from 500 kW to 1 MW for industrial use.

Which device or software is the right one for you? That obviously depends on whether you own just the roof of your house, manage a whole solar power plant or run a region with millions of inhabitants who could switch to clean energy with your and our help.

We offer easy-to-use solutions with software to help you find the perfect inverter for your needs, as well as a monitoring system to track the output of your solar power plant.

We reduced the complexity of our products so that we can provide simple and affordable inverters, which focus on conversion of direct current into usable alternating current. They were awarded numerous international certificates and are the perfect choice for easy access into the world of photovoltaics for everybody.

Please ask your dealer or go online to find the right solution for your objectives and see the current overview of certificated products in your country at zeversolar.com/products.

Revolutionaries – to your posts!

The people on our team are not just willing to change the world of photovoltaics. They also have the instruction manual for doing so. And they have fast access to specialists in the field of DC/AC conversion to support them. Get in touch with our regional sales staff to learn more about Zerversolar.

Just in case you need help after having installed our inverters, our Customer Interaction Center will support you in solving your problem.

Our Customer Interaction Center is available in Australia – in English – and in Europe – in English and German – by phone from 9:00 a.m. to 5:00 p.m. But you can also contact us by email or on our website.

The energy revolution is in a full swing, and with your and our help, clean energy will be available everywhere and for everyone.

Shout our rallying cry. And call our experts for support.
